Technology & Infrastructure Live Pulse

Continuous AI Sentiment Signal for Digital Grid Policy (SDG 9)

AI HACKATHON PROJECT

Kadir & Joe

Problem & Target User

THE CHALLENGE

Rapid AI data center growth and cloud computing strain electric grids and increase household utility costs.

THE PROBLEM

Manual news tracking is slow, fragmented, and inefficient.

THE SOLUTION

Automated, real-time news radar detecting grid bottlenecks, policy announcements, and public concerns.

TARGET USER

Digital Infrastructure Policy Officer

at a local municipality

System Architecture & Pipeline

01

Data Source

Continuous Google News RSS stream fetched every 10 minutes.

02

Filtering & Deduplication

Domain keyword filters (data centers, 5G, electric grid, outages) + SHA-256 URL hashing to remove duplicates.

03

AI Sentiment Engine

Hugging Face transformer model (ProsuAI/finbert) classifying headlines as Positive, Neutral, Negative.

04

Storage & Frontend

Lightweight SQLite database powering an interactive Streamlit dashboard.

Live Dashboard in de praktijk

Deploy

Technology & Infrastructure Live Pulse

Headline sentiment monitoring for SDG 9 policy officers. Collection runs periodically. Use Refresh data to load the latest saved results.

Refresh data

Charts show headline counts grouped by collection time in UTC, not publication time or incident severity. Table filters do not change the cards or charts.

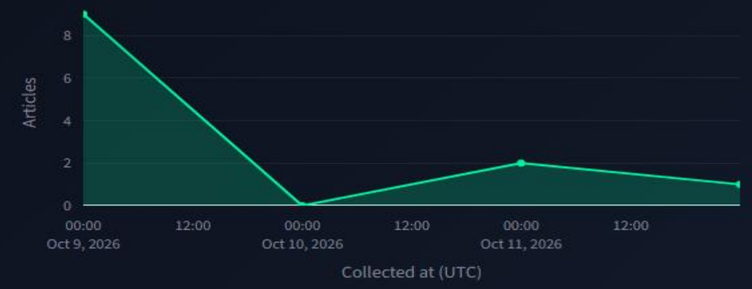

Total Monitored	Positive Headlines	Neutral Headlines	Negative Headlines
128 items	12 items	93 items	23 items

Headline Counts by Predicted Sentiment

Time aggregation window:

Hourly (1h) · Every 3 Hours (3h) · Daily (24h)

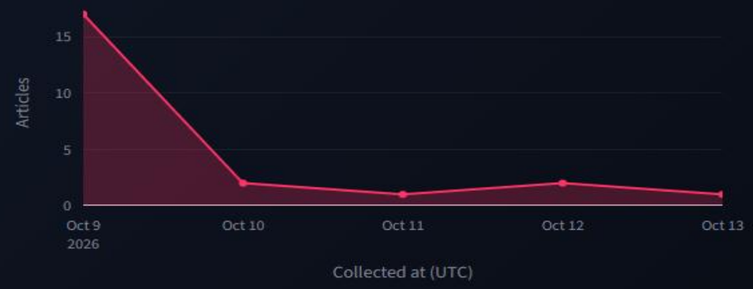

Positive Headlines

Neutral Headlines

Negative Headlines

Interpretation note: Review the underlying articles when headline counts change. Sentiment predictions do not verify incidents, measure severity, or represent public opinion. This note is always displayed and is not an automatically triggered alert.

Honest Model Benchmark

Our 50-Item Test

50	Total Headlines Evaluated from live pipeline
66.00%	Overall Accuracy 33 out of 50 correct
96.0%	Neutral Recall 24/25 very high precision on factual governance and infrastructure reports
36.8%	Negative Recall 7/19 reveals a critical neutrality blindspot regarding household utility cost issues

Ethical Reflection & Failure Analysis

CORE FAILURE

FinBERT trained on financial data misclassifies electricity price hikes as neutral economics, not public burden.

ETHICAL SAFEGUARDS

- **Human-in-the-loop:** AI signals require human verification before action.
- **Transparent links** allow users to inspect original news articles directly.
- **Strict privacy policy:** no personal or citizen data collected, only public news headlines.

Conclusion & Takeaways

AI IS ONLY AS GOOD AS ITS DATA

Confidence doesn’t equal correctness.
Training data defines what AI **can’t see.**

NEXT STEP: LOCALIZE & EXPAND

Integrate local Dutch municipal news feeds alongside international English news.

IMPACT: EMPOWER RESPONSIBLY

Enable policy officers with transparent, responsible AI decision support aligned with UN **SDG 9** goals.
